

Sprint 1 Review

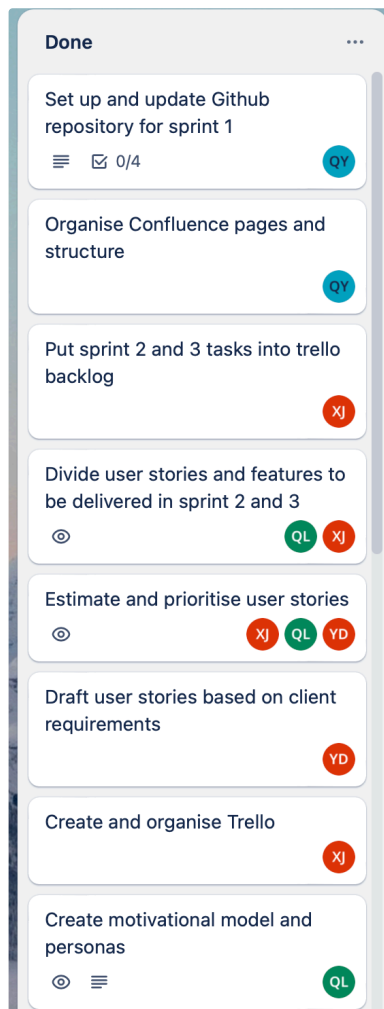

1. Sprint Goal Achievement

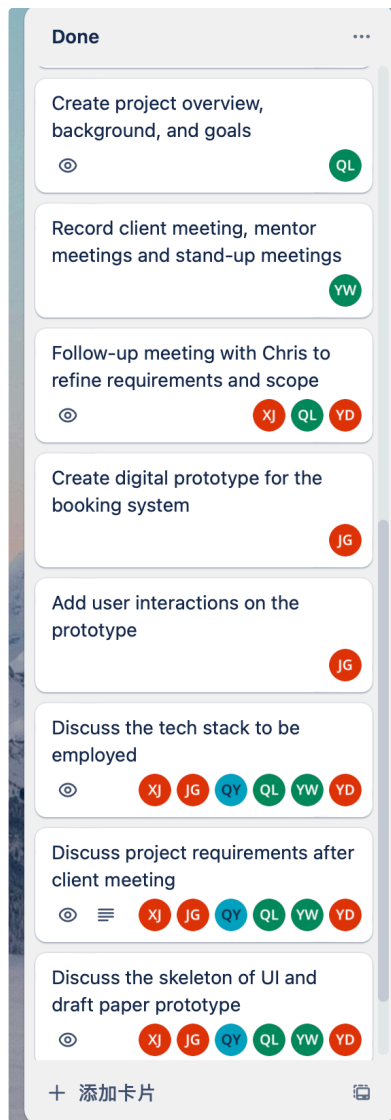

During the sprint1 phase, we communicated to understand and gather customer requirements. Based on the information provided by the client in conjunction with the project requirements, we refine the scope and requirements, create a motivation model, define clear user stories, and develop digital prototypes.

We set up the development environment. Use Confluence and Trello for project management and documentation. Use Slack for communication between team members. Create Github files to manage the development process of the project.

2. Completed and uncompleted Product Backlog items

In sprint 1, we completed all items in the product backlog.

3. Stakeholder Feedback:

In the sprint review meeting, we confirmed the user stories, prototype and technical details with clients. The following is the client review:

- a. Confirmed the user stories with clients, according to the feedback from clients, we adjusted some of the priorities and updated the new user stories.
- b. Show the prototype to clients, and explain the jumps between each component.
- c. The client agreed that we would change the technology stack to Vue and Element Plus for the front end, and change the technology stack to Springboot and MongoDB for the Back end.
- d. Clients provide more details for the program page and program table. In addition, provide more requirements for the school page.
