

Goal Models

In this project, the use of the Goal Model is of great significance. First, since the project aims to simplify and optimise the reservation system of the Science Gallery, a clear goal model can help the team clearly understand and define the main goals of the project, such as simplifying the reservation link, improving work efficiency, and enhancing user experience. Secondly, the Goal Model can also help the team transform these high-level goals into specific and measurable sub-goals, such as designing and implementing online booking web pages and booking dashboards. We can also use goal models to confirm progress and accuracy at every stage of development.
