

Sprint 4 Goal

The goal of Sprint 4 is to finalise, deploy and deliver our project with a focus on thorough documentation, comprehensive release preparations, and effective communication of our product's capabilities. We intend to first finalise the project, finishing the booking records user stories left from the last sprint. Then we will deploy the front-end and back-end of our product. We will also produce a demonstration video of our product, showcasing its functionality and features.

Lastly, we will ensure that all project documentation, including meeting notes, release tags, demonstration videos, and final presentation slides, are organised and available on both Confluence and Github respectively, and that the release is successfully handed over to the client.
